

Ronny

Solution Architect

E-mail ronnyourmatrix@gmail.com

From simple to complex, I have worked on applications covering most of the programming spectrum from low-level to high-level, from highly custom to cloud oriented. I perform non-programming activities like writing documentation, managing work and product development. I am good at architecture design and actual coding. At times, I was tasked to solve difficult problems, but my goal as programmer has always been to aid people by writing software.

Technical Skills

- API and AI Integration
- Software Architecture
- C# / .NET 10.0
- Mobile App Development
- REST / Web API
- Microservices
- ASP.NET / Razor Pages
- Desktop Application
- Reactive Programming
- Multithreaded & Parallel Programming
- Distributed Programming

Work Experience

FREELANCER Solution Architect

Bucharest, Romania

September 2024 – Present

Coordinated mobile and backed development of FinTech app intended for fast seafarer on-boarding across the world. Clarify features, organize priority and scope for fast MVP delivery, including PCI DSS and security audit. ([Venner App](#))

Designed architecture and implemented secure API for easy integration with document handling machine. This machine replaces manual labor, including customer identification, payments and filling documents.

Extended features of smart fridge with touch screen intended for food and nutrition management, with recommendations and dish assistance.

MODEX TECH LIMITED
Integrations Developer

Bucharest, Romania

April 2021 – August 2024

Developed satellite .NET applications for Modex Blockchain private enterprise blockchain. This software helped integrate existing applications with Modex Blockchain.

Implemented Azure Marketplace SaaS integration as ASP.NET website that enables customers to deploy and manage their Modex Blockchain instance after purchasing a subscription from Azure Marketplace.

Developed features of FIFA Collect in Next.js/React. Also made adjustments in Express.js, BullMQ and Directus CMS.

CLOUD BUSINESS SOLUTIONS
Senior .NET Developer

Bucharest, Romania

October 2018 – January 2020

Project lead on lawyer case management desktop application, developed in UWP for Windows. This intended to reduce the performance bottleneck and integration issues of existing ASP.NET WebForms application.

Worked on various research projects like Outlook add-ins, Electron.js, web-based document management, like OneDrive and box. Also researched task automation in Windows and MacOS.

Team leader of .NET Development Team. Created several automation scripts that helped migrate towards continuous integration and improved Agile development focus on client-developer interaction and feedback. Participated in the maintenance of the existing web-based application, mostly on API development. Collaborate with mobile team and Q&A for bug fixing and app versioning.

TECHNOSOFT INTERNATIONAL

Computer System Programmer

Bucharest, Romania

February 2015 – November 2018

Assigned to modernize the UI and architecture of Technosoft Motion Studio, an IDE originally written in C++/MFC. This IDE provides customers the ability to program, configure, monitor and debug their Technosoft motion control devices.

Designed and implemented C++/CLI middleware that enables use of C++ logic from C#. Also, created façade over the communication service that adds multithreading support. This middleware allowed migration to WPF and use of MVVM to speedup UI development and improve code modularization.
