

Răzvan CHISA

Solution Architect

Contact

<https://razvan-chisa.github.io>

From simple to complex, I have worked on applications covering most of the programming spectrum from low-level to high-level, from highly custom to cloud oriented. I perform non-programming activities like writing documentation, managing work and product development. I am good at architecture design and actual coding. At times, I was tasked to solve difficult problems, but my goal as programmer has always been to aid people by writing software.

Technical Skills

- API and AI Integration
- Software Architecture
- C# / .NET 10.0
- Mobile App Development
- REST / Web API
- Microservices
- ASP.NET / Razor Pages
- Desktop Application
- Reactive Programming
- Multithreaded & Parallel Programming
- Distributed Programming

Work Experience

FREELANCER

Solution Architect

Europe, Middle East, Africa

September 2024 – Present

Coordinated mobile (Dart) and backed (Python/FastAPI) development of FinTech app intended for fast seafarer on-boarding across the world. Clarify features, organize priority and scope for fast MVP delivery, including PCI DSS and security audit. ([Venner App](#))

Designed middleware architecture and implemented secure WebAPI/.NET for easy integration with document handling machine. This machine replaces manual labor, including customer identification, payments and filling documents.

Extended features of smart fridge with touch screen intended for food and nutrition management, with recommendations and dish assistance. Application developed in MAUI/.NET .

MODEX TECH LIMITED

Integrations Developer

Gibraltar, Gibraltar

April 2021 – August 2024

Developed satellite .NET applications for Modex Blockchain private enterprise blockchain. This software helped integrate existing applications with Modex Blockchain. Researched data focused tools like Kafka, ActiveMQ, Kusto, PrestoDB, MongoDB and ElasticSearch.

Implemented Azure Marketplace SaaS integration using WebAPI/.NET that enables customers to deploy and manage their Modex Blockchain instance after purchasing a subscription from Azure Marketplace.

Developed features of FIFA Collect in React/Next.js. Also made adjustments in Express.js, BullMQ and Directus CMS. Helped onboard new developers and manage GitHub CI/CD deployments to Google Cloud.

TECHNOSOFT INTERNATIONAL

Computer System Programmer

Bucharest, Romania

February 2015 – November 2018

Assigned to modernize the UI and architecture of Technosoft Motion Studio, an IDE originally written in C++/MFC. This IDE provides customers the ability to program, configure, monitor and debug their Technosoft motion control devices.

Designed and implemented C++/CLI middleware that enables use of C++ logic from C#. Also, created façade over the communication service that adds multithreading support. This middleware allowed migration to WPF and use of MVVM to speedup UI development and improve code modularization.
